02.05.2023

---

# The case for sharing

Dramatically increases the volume of data available for research

Lowers the cost of collection and increases the scope of analysis

Reduces the burden on affected communities to continually re-tell their stories

---

---

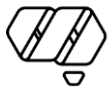

# Increasingly becoming best practice

## Development 1

- Increasing requirement across academic institutions to ensure and report on data accessibility

## Development 2

- And it's actually noted in the National Statement!

# The case for caution

Need to take care that correct attribution is given to data collectors

Will data be analysed in the appropriate context

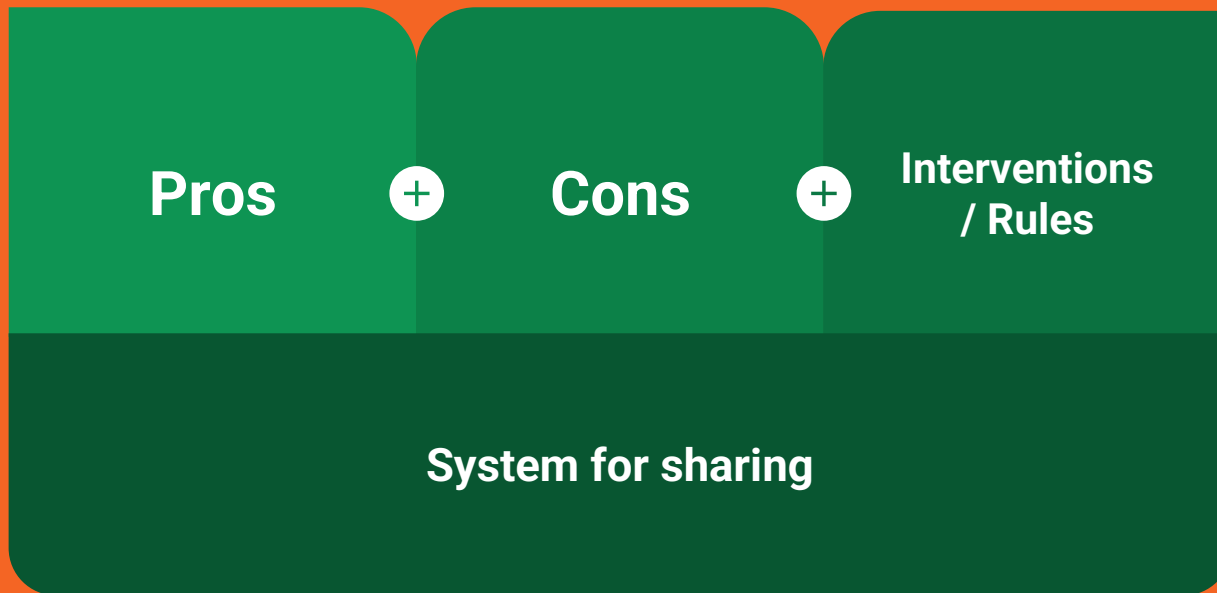

Can we be sure that participant privacy can be assured

---

---

# We're here to find out

---
